(54) TERMINAL EQUIPMENT

(57) Abstract:

PURPOSE: To provide an inexpensive portable terminal equipment capable of automatically tuning the broadcasting of a radio and television, etc., even when a place is moved in a portable telephone system provided with a function for receiving the broadcasting of the television and the radio, etc.

CONSTITUTION: The position information of a portable telephone base station is received from an antenna 1 for a portable telephone and registered in the position information registration part 101 of a storage part 10. The correspondence table of the key number of a one easy step key input part 9 and a desired broadcasting station is provided in a broadcasting station registration part 102. Then, since the correspondence table of the position information for a certain broadcasting station and a broadcasting station frequency is provided in a frequency registration part 103, a control part 8 retrieves the broadcasting station corresponding to the selected key number in the broadcasting station registration part 102, retrieves a frequency corresponding to the position information registered in the position information registration part 101 in the frequency registration part 103 and tunes a broadcasting reception part 12 to the frequency.
